This is an example document, an AcroForm with three form fields: two text fields and a hidden button field.

Here we have a form field: _____

Below we have another form field, but this time there is a hidden button on top of it that redirects you to https://get.adobe.com/reader/. Because the button is hidden, you should be able to click on the text field. However, this is not possible on Adobe Acrobat for Android. On Adobe Acrobat for Android you will always end up click on the overlaying, hidden button field.

Just try to enter something into this field: _____
